BASIC-ABSTRACT:

NOVELTY - A flowerpot cover having a closed cylindrical shape to receive conventional flower pots and cover substantially the entire interior surface of the pots without the leakage of water from the bottom part is provided. It prevents the death of plants by moisture deficiency during one is out for a long period of time and has a repotting effect by changing only with the flowerpot cover.

DETAILED DESCRIPTION - A flowerpot cover(10) is constructed to receive and cover substantially the entire interior surface of conventional flower pots(100) and made of aluminium. It also contains an air vent hole(13, 103) for permitting air or gas generated from plants(105) to enter and exit and has a spherical shape. A jaw(101) part of conventional flowerpots projected outwardly is hang and fixed on the upper part(12) of the flower pot cover, the flowerpots have a water discharge hole(102) at the bottom.
